

Cooling Tower Replacement BIPI

Client:

Boehringer Ingelheim
Pharmaceuticals Inc.

Location:

Danbury, CT

Project:

Boehringer provides high temperature hot water, electrical power and chilled water from its central power plant. Salem recently completed a cooling tower upgrade at the plant which included equipment replacement, piping and process control modifications.

Salem has worked on several systems at the central plant including high temperature hot water, process control, power distribution, pumping systems, potable water systems, refrigeration systems, and water treatment systems.
