

University of Vermont Catholic Center

Client:

Diocese of Vermont

Location:

Burlington, Vermont

Project:

This phased project consisted of construction of a 3,200 SF two-story addition to the existing building to house office and residential quarters, a 4,000 SF gathering space/lobby building addition, and the addition of air conditioning to the existing sanctuary.

The existing electrical service entrance supporting the Catholic Center had insufficient capacity to serve the additional air conditioning loads, and required replacement with a new three-phase service entrance.
