

# Children's Specialty Center FAHC

**Client:**

Fletcher Allen Health Care

**Location:**

Burlington, Vermont

**Project:**

This major alteration and fit-up of approx. 7,000 SF of existing hospital space provides a lobby renovation and a new health care center devoted exclusively to children and adolescents, consisting of physician on-call rooms, a nurse station, screening and exam rooms, and a play room area.

The project area, located in the immediate vicinity of the hospital's main entrance, required phased construction to maintain operation of various hospital administrative function areas.

Systems design for this area required an innovative approach to HVAC needs due to the limitations that existed with the building infrastructure. Special lighting designs were critical to the ambiance desired at this focal point of the Medical Center.
