

LIQUID RECOVERY FACILITY

UOR

Client:

United Oil Recovery

Location:

Meriden, CT

Project:

The liquid recovery facility in Meriden, CT represents state-of-the-art technology for the delivery, resource recovery, and waste handling of oils and solvents, including hazardous waste products. United Oil's environmentally safe waste minimization and treatment facility has drastically reduced their disposal costs by reclaiming and purifying liquid oil waste products for reuse.

Salem Engineering played an integral role in conducting the NFPA reviews to ensure the tank appurtenances; process piping and equipment, electrical, and ventilation systems were designed and installed in conformance with applicable fire protection codes.
